Turn your pool or pond in to a nighttime oasis of class and style with Glow floating water products.

Beware of cheaper products that are not rated for use in pools. Glow Illuminated LED Sphere Balls are rated IP67, meaning they are waterproof and made for floating in pools. Anything less is not a waterproof product.

These Glow products operate with new easy charging technology by charging on an induction plate rather than plugging in a charger direct to the ball. Once charged they can be moved anywhere you need them such as on tables, in the garden, on the lawn, in a tree or even floating on water. Yes, that's right even in water, because this new product to the Glow range is made for water too.

The Glow Sphere Balls are available in diameters of 25cm, 35cm, 50cm and 60cm and like all Glow products; they

are made for Australian conditions. While these can be placed anywhere, they are perfect for floating in a pool or pond to create the perfect lighting effect.

With the included infrared remote control, you decide how your Glow Sphere Ball will operate. Change the colour (red, blue, green, yellow, white, pink, purple or any of the other 16 colours) or transition the colours to change automatically like a lava lamp and many other lighting function. You can also make the colours change speed and control the brightness of the light.

With the built-in hanging handle, you can also hang the ball anywhere you need some additional lighting.
